ENERGY STAR Version 3 (V3)

Homebuyers are increasingly attracted to energy efficient homes. Now you can fulfill the needs of cost-conscious, environmentally aware buyers by qualifying your homes and earning the ENERGY STAR label, either through a predefined package of improvements or on a customized package of upgrades.

Visit www.energystar.gov for more information on ENERGY STAR Version 3.

Rebate Application Details

To receive an application form or for more information, interested homebuilders may contact Southwest Gas Energy Specialists at 1-800-654-2765. Homebuilders are required to complete an application for each submission and provide a lot number and an address list for the participating subdivision phase. Homebuilders and their HERS providers are also required to sign the application. Rebate payments will be issued once the HERS provider has submitted the energy savings information for each plan.

Rebates are available for homes certified as ENERGY STAR on or after January 1, 2013. Applications must be submitted to Southwest Gas no later than December 15, 2013. All submitted homes remain subject to approval. Other restrictions may apply.
