

Natural Gas Makes A Difference

You know about the advantages of natural gas – it provides you with warm, even heat; precise temperature control when cooking; a fast, dependable source of hot water; instant heat for clothes drying; and the cozy ambience of a natural gas fireplace. But did you know natural gas is three times more efficient than electricity to power appliances?

As you can see, while natural gas can be used to produce electricity, delivering it directly to your home for heating, water heating, cooking, and clothes drying is the most efficient use of this valuable resource.

Natural gas remains the best energy value and environmentally responsible choice that delivers comfort and convenience.

How Green Is Your Home?

SOUTHWEST GAS

A greener home is more than putting up solar panels or parking a hybrid in the garage. It's about owning a home that provides dependability, convenience, comfort, and a clean environment — a **greener-than-you-think** home that thrives with natural gas.

Choose Natural Gas!

Dependable –

Unlike wind and solar, natural gas doesn't depend on the weather and is readily available with a hundred-year supply right here in America. More than 99% of the natural gas we use is produced right here in North America – reducing reliance on foreign imports.

Convenient –

Natural gas storage water heaters, tankless water heaters, clothes dryers and cooktops are highly efficient and easy to use. With a turn of the knob you can have an endless supply of hot water, precise temperature control for cooking and faster drying time for laundry.

Comfortable –

Heat from a high-efficiency natural gas furnace circulates quickly, creating cozy warmth without the damp, cool draftiness associated with an electric heat pump.

Cleaner for the environment –

The carbon footprint of a natural gas home is an average of 46% less than an electric home using the same appliances.
