

Spish, splash, save some energy and some cash...

- Set your water heater thermostat at 120°F for comfortable hot water for most uses.
- Use the “vacation” mode or lowest setting when away for one week or more.
- Install low-flow showerheads and faucets to reduce water waste.
- Run your dishwasher and washing machine only when full.
- Insulate exposed hot water pipes.

Get More With
Natural Gas
Water Heating

The natural choice that is
Greener Than You Think

More than just a drop in the bucket...

When compared to an electric model, a natural gas storage water heater offers you...

- **More efficiency** – heats water twice as fast as electricity so you get more hot water in less time.
- **More savings** – enjoy low operating costs and energy savings with a high-efficiency model.
- **More environmentally friendly** – emit 50% less carbon.

...And get even **more** with natural gas tankless water heaters

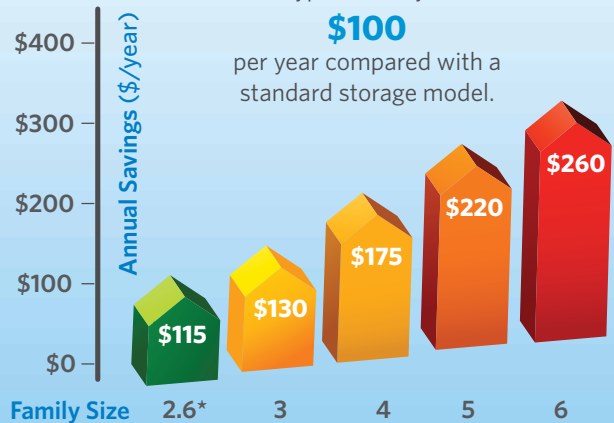

- Continuous supply of hot water
- Smaller size gives you more space
- Higher energy-efficiency ratings saves you even more energy

ENERGY STAR® tankless models can save the typical family more than

\$100

per year compared with a standard storage model.
