

With Natural Gas the Difference is Clear!

While natural gas can be used to produce electricity for your appliances, a large percentage of the energy used for production is lost during the process.

With natural gas production, 90% of what originates from the gas well is delivered and ready to fuel your natural gas appliances.

ELECTRIC

{ 30%
efficient

About 70% lost in generation and delivery

NATURAL GAS

{ 90%
efficient

About 10% lost in extraction and delivery

Natural gas - the more efficient energy choice.

Leave behind a smaller footprint...

When you use natural gas directly at an appliance for heating, water heating, cooking and clothes drying, you're using an energy source that's three times more efficient than electricity. You're also choosing to protect the environment by lowering your carbon footprint.

Go straight to the source with smarter, cleaner natural gas.
