

# Natural Gas Appliance Advantages

- Natural gas dryers heat up faster than electric, and the shorter, more efficient drying cycles help clothes last longer.
- Shorter drying cycles also mean you'll spend less time in the laundry room!
- When a gas dryer turns off, the heat dissipates quickly, reducing the amount of wrinkling. That's an important feature if you can't fold the clothes right away.

## PURCHASING TIP:

Select the dryer size that best meets your needs. Make sure the dryer you select is comparable in capacity to the washer you own or decide to purchase. A dryer that is too small will be slow and inefficient. One that is greatly oversized may not tumble small loads properly, and can result in wasted energy.

## Natural gas is the best energy value

Make the one natural choice when it comes to drying your clothes. You'll be glad you did because natural gas is nature's cleanest-burning fossil fuel. When burned, natural gas emits 45 percent less CO<sub>2</sub> than coal and 30 percent less CO<sub>2</sub> than oil – fuels used to generate electricity. This means a smaller carbon footprint and cleaner air.

Natural gas remains the best energy value – an environmentally responsible choice that delivers comfort and convenience.

Choose natural gas and enjoy cost-effective and energy-efficient drying. Call our Energy Specialists today at **1-800-654-2765** and ask if you have a natural gas dryer connection in your home.
